

Protecting our world

Looking after wild places including our waterways keeps wildlife safe as well as people.

Draw/write down some small but practical ways we can save habitat and the animals that live there

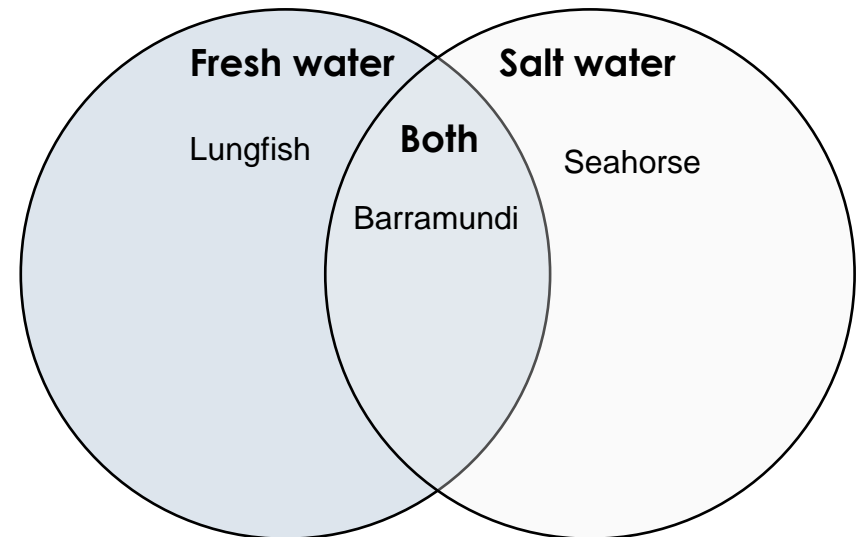

Rivers to Reefs

NAME :

Waterways support our lives and other living things

Fresh or Salt?

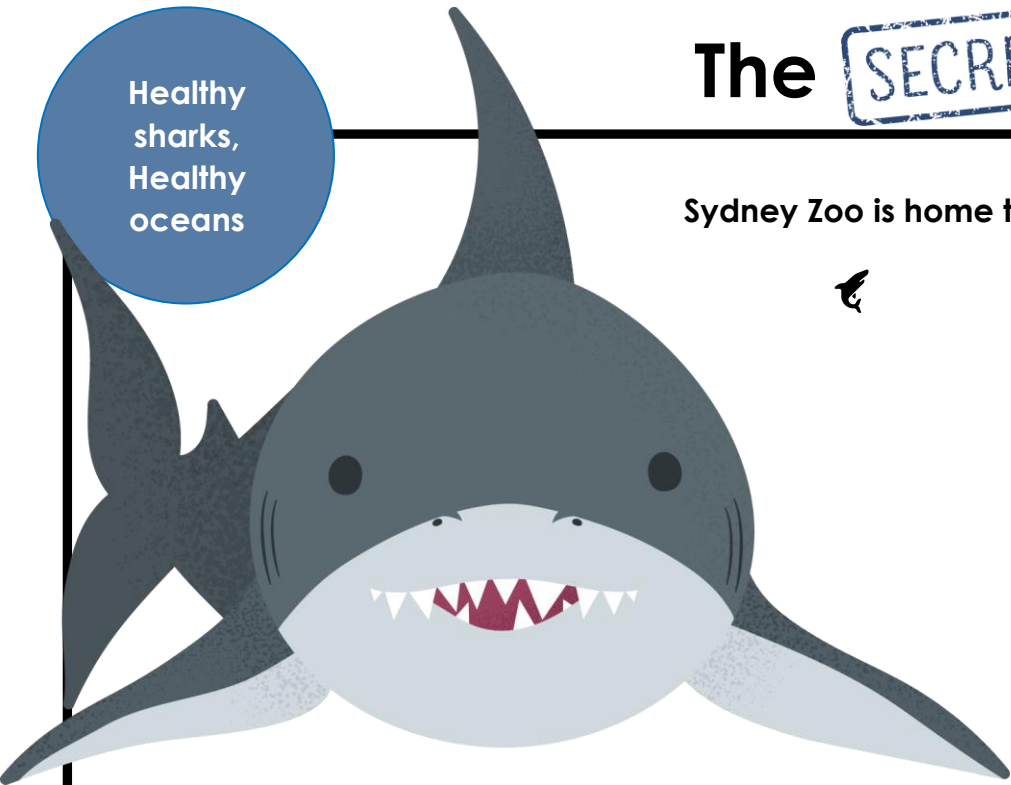

Sydney Zoo's aquarium is home to many species – some live in fresh water, some live in salt water, some can live in both! Can you find 2 that can live in each type of water? We've done an example for each. *Hint – there are 2 small blue habitats with salt water species, the Shark habitat has animals that live in both.*

Healthy sharks,
Healthy oceans

The **SECRET** life of sharks

Find this information in our Aquarium

Sydney Zoo is home to what kind of shark?

Worldwide, shark numbers are declining, what threats are sharks facing?

Sharks use our rivers and mangroves as nurseries to protect baby sharks from larger predators. The health of our local creeks and rivers can impact the health of our sharks which also impacts the health of our oceans.

Why are sharks so important?

How can you help sharks?
